

The Active Flight Plan page has a map on the top of the screen to include the magenta-colored course line. The bottom half of the screen shows 3 flight-plan waypoints along with an area to add another waypoint. Each flight plan may contain up to 300 waypoints.

These 2 values are Determined by the settings in the Profile. (Menu/Tools/Profile)

Menu Selections

Field Choices

The two fields (DTK and DIST) are selectable from the Field Choices shown. Touch the field to be changed to view the selection list.

Stop Navigation - Deletes the selected flight plan.

Set OBS and Hold - Allows the choice of courses to the active waypoint. Use “Resume Flight Plan” will return to the original Active Flight Plan screen.

Select Approach - Opens a screen that shows the approaches to the destination airport. Once selected, “Load Approach”, “Activate Approach”, and “Activate Vectors-to-Final” may be used.

Invert Flight Plan - Reverses the order of waypoints.

Save Flight Plan - Self explanatory. You may not want to save a one-time use flight plan.

Flight Plan List - Goes directly to the Flight Plan List page.

Show Map - Reverts to a full-screen map that shows the entire flight plan. Other than scale changing and panning, there are no options.
